

the operator.

Maximum performance, minimmum electrical risk.

Safety reaches the highest levels with the spider platforms of the "i" series, insulated up to 46 kV, born from in-depth studies on the electrical risk and the desire to ensure at the same time maximum efficiency and the highest level of protection for those working on or near high voltage lines. The single-man fiberglass basket, as well as the fiber insulators positioned on the aerial part, combined with the use of a special non-conductive oil and other insulated components, allow to minimise the risk of electrocution for

Added to this are the technological advantages that a CMC platform of the latest generation is able to offer, such as the automatic execution of most of the operations of control and stabilisation of the platform.

ADVANTAGES

Maximum protection against electrical risk

The CMC "i" series platforms are insulated up to 46 kV thanks to their fibreglass basket, to the special insulating inserts placed between the different sections of the aerial part and to the use of a non-conductive oil and other insulated components.

Ease of transport

As high-performance as they are low in weight and compact in size, the CMC "i" series platforms are self-loading and easy to transport on trailers.

Ease of use

The "i" series platforms are equipped with the latest generation of radio remote control and a system that automatically performs stabilisation and levelling, automatic centring and self-loading operations.

FEATURES

| Some available options | i23 | i 27 |
|--|-----|-------------|
| Version with lithium battery (300 Ah) | • | • |
| Hybrid version (diesel engine + lithium batteries) | • | • |
| 380V, 230V, 120V or 110V electric motor | • | • |
| Grey non-marking tracks | • | • |
| Remote connection with Sim Card and GPS Locator | • | • |
| Customised colours | • | • |

CMC i SERIES PLATFORMS APPLICATIONS

Power line maintenance

Repair and maintenance of medium and high voltage cables and pylons.

Management and maintenance of industrial sites

in particular installations for the production of electrical energy.

Pruning of tall trees

where it is necessary to work near high-voltage lines.

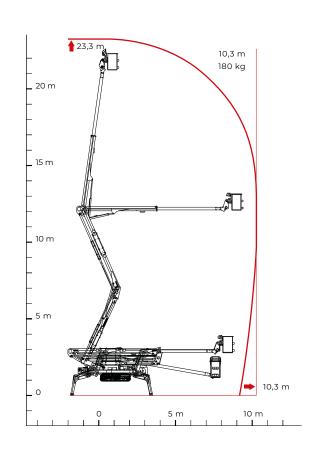

PERFORMANCE AND DIMENSIONS

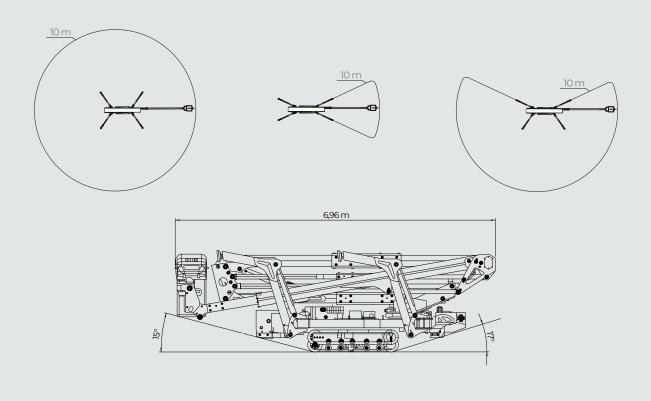

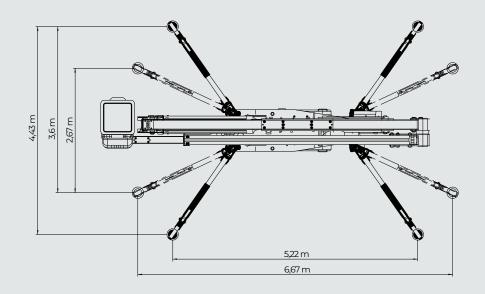

Main features

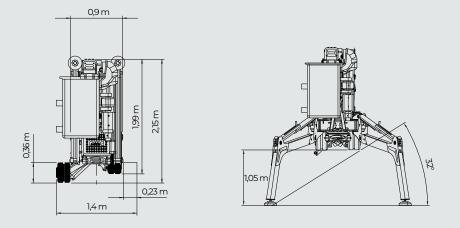

Electrically insulated up to 46 kV, the CMC i23 is a double pantograph geometric platform with the largest unrestricted outreach in its class. With its 23-metre working height, three stabilisation areas and automatic outrigger levelling, it can perform at its best in any conditions.

| Maximum working height | 23,3 m |
|------------------------------|-------------------------------|
| Max. outreach | 10,3 m |
| Platform height | 21,3 m |
| Max. load capacity in basket | 180 kg |
| Basket dimensions | 0,6 x 0,6 x 1,1 m |
| Basket rotation | +/-90° |
| Turret rotation | +/- 200° (400° continuous) |
| Total weight | 3930 Kg |

TECHNICAL DATA

i27

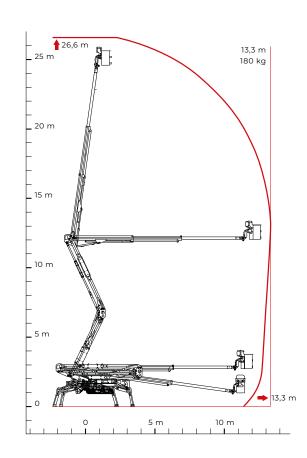

PERFORMANCE AND DIMENSIONS

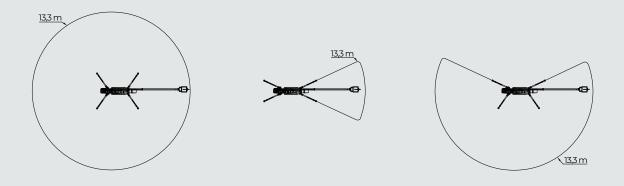

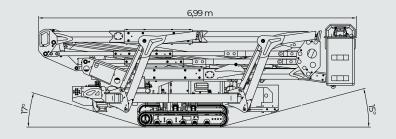

Main features

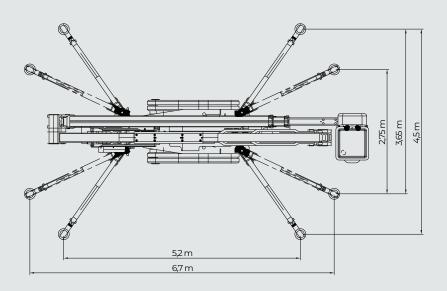

Electrically insulated up to 46 kV, the CMC i27 is a double pantograph geometric platform with the largest unrestricted outreach in its class. With its 27-metre working height, three stabilisation areas and automatic outrigger levelling, it can perform at its best in any conditions.

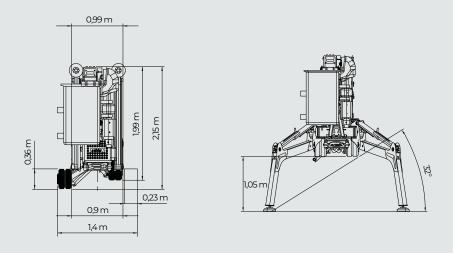

| Maximum working height | 26,6 m |
|------------------------------|-------------------------------|
| Max. outreach | 13,3 m |
| Platform height | 23,6 m |
| Max. load capacity in basket | 180 kg |
| Basket dimensions | 0,6 x 0,6 x 1,1 m |
| Basket rotation | +/-90° |
| Turret rotation | +/- 200° (400° continuous) |
| Total weight | 4680 Kg |
